Please join us for an engaging roundtable of entrepreneurial Mines. This roundtable series will give participants a platform to explore the multiple ways to innovate through entrepreneurial thinking. We will explore the contemporary challenges of innovating a business model to capture value effectively and responsibly. Our aim is to crowdsourced the best out-of-the-building thinking while grounding the discussions in rigorous methods and promising research.

In the quest for stronger health and motion analytics, the first step is data collection. Cipher Skin has developed a patented sensor technology that revolutionizes the way data on human movement is collected, reported, analyzed and monitored. With greater quantity and quality of data collected, Cipher Skin is leading the way towards a new field of predictive health and performance optimization.
